

Self-Check Questions: Transitioning from Solution Design to Development and Testing

Here are some self-check questions to make sure a smooth transition from the Solution Design stage to the Development and Testing stage in the automation project:

Code repository setup:

- ☐ Have I provided developers with clear and detailed guidance on code repository setup and procedures?
- ☐ Is the approach to code check-ins standardized and well-communicated?

Access requests:

- ☐ Have I reviewed and verified all application access requests in the tracker?
- ☐ Are all access requests appropriately marked as Access Requests: "Approved"?

SDD approval:

- ☐ Is there a comprehensive understanding among all relevant parties regarding the technical aspects outlined in the SDD?
- ☐ Have I ensured alignment among relevant parties regarding the technical aspects of the automation project?
- ☐ Is there clear communication and understanding among team members about their roles during the transition?

Effort estimation:

- ☐ Have I revisited and fine-tuned the effort estimation based on the designed solution?
- ☐ Is the effort estimation realistic and aligned with the project's scope and requirements?
- ☐ Have potential risks and challenges during the transition been identified and documented?
- ☐ Are there mitigation strategies in place for identified risks?
